

AMENDMENTS TO THE CLAIMS

The following listing of claims replaces all prior versions, and listings, of claims in the Application.

Listing of Claims:

Claims 1-21 (Canceled).

Claim 22. (Currently amended) A handheld device for communicating an image via a communication network, the device comprising:

an imaging device for capturing an image as image data;

processing circuitry for processing the image data;

a wireless communication interface for transmitting the processed image data;

a display device for providing feedback to a user; and

wherein a communication path used by the device to wirelessly communicate data is automatically selected from a plurality of communication paths based upon a type of data being communicated, and wherein a first communication path is selected when the type of data is ~~one or both of~~ processed image data and ~~and~~ a second communication path is selected when the type of data is speech data.

Claim 23. (Previously presented) The handheld communication device of claim 22 wherein the imaging device is a charge coupled device.

Claim 24. (Previously presented) The handheld communication device of claim 22 wherein the image is one of a one dimensional code and a two dimensional code.

Claim 25. (Previously presented) The handheld communication device of claim 22 wherein the image is text.

Claim 26. (Previously presented) The handheld communication device of claim 22 wherein the image is handwriting.

Claim 27. (Previously presented) The handheld communication device of claim 22 wherein the image is a picture.

Claim 28. (Previously presented) The handheld communication device of claim 22 wherein the wireless communication interface is used for communicating speech.

Claim 29. (Previously presented) The handheld communication device of claim 22 wherein the wireless communications interface is compatible with a cellular network.

Claim 30. (Previously presented) The handheld communication device of claim 22 wherein the wireless communications interface uses a spread spectrum technique.

Claim 31. (Previously presented) The handheld communication device of claim 22 wherein the communication network is a local area network.

Claim 32. (Previously presented) The handheld communication device of claim 22 wherein the communication network comprises a packet network.

Claim 33. (Previously presented) The handheld communication device of claim 22 wherein the communication network comprises a TCP/IP network.

Claim 34. (Previously presented) The handheld communication device of claim 22 wherein the processing comprises decoding the image from a first representation to a second representation.

Claim 35. (Previously presented) The handheld communication device of claim 34 wherein the second representation is a digital representation.

Claim 36. (Previously presented) The handheld communication device of claim 22 wherein the processing comprises character recognition.

Claim 37. (Currently amended) A method of operating a handheld image communication device, the method comprising:

capturing an image as image data;

processing the image data;

wirelessly transmitting the processed image data via a communication network;
and

wherein a communication path used by the device to wirelessly communicate data is automatically selected from a plurality of communication paths based upon a type of data being communicated, and wherein a first communication path is selected when the type of data is one or both of processed image data and[[/or]] a second communication path is selected when the type of data is speech data.

Claim 38. (Previously presented) The method of claim 37 wherein the capturing, the processing, and the transmitting occur within the same device.

Claim 39. (Previously presented) The method of claim 37 wherein the image is captured using a charge coupled device.

Claim 40. (Previously presented) The method of claim 37 wherein the image comprises one of a one dimensional code image and a two dimensional code image.

Claim 41. (Previously presented) The method of claim 37 wherein the processing comprises:

identifying the type of information in the image.

Claim 42. (Currently amended) The method of claim 41 wherein the processing is able to specifically identify the type of information the image is identified as at least one of text, handwriting, [[and]] or a picture.

Claim 43. (Previously presented) The method of claim 37 wherein the processing changes a first representation into a second representation.

Claim 44. (Previously presented) The method of claim 43 wherein the second representation is a digital representation.

Claim 45. (Previously presented) The method of claim 37 wherein the communication network is a local area network.

Claim 46. (Previously presented) The method of claim 37 wherein the communication network is a cellular network.

Claim 47. (Previously presented) The method of claim 37 further comprising:
wirelessly communicating speech via the communication network.

Claim 48. (Previously presented) The method of claim 37 further comprising:
displaying information to a user.

Claim 49. (Currently amended) A method of operating a handheld image communication device, the method comprising:

capturing an image as image data;

processing the image data;

wirelessly communicating the processed image data and speech via a cellular communication network; and

wherein a communication path used by the device to wirelessly communicate data is automatically selected from a plurality of communication paths based upon a

type of data being communicated, and wherein a first communication path is selected when the type of data is ~~one or both of~~ processed image data and[[/or]] a second communication path is selected when the type of data is speech data.

Claim 50. (Previously presented) The method of claim 49 wherein the capturing, the processing, and the communicating occur within the same device.

Claim 51. (Previously presented) The method of claim 49 wherein the image is captured using a charge coupled device.

Claim 52. (Previously presented) The method of claim 49 wherein the image comprises at least one of a two-dimensional code, text, handwriting, and a picture.

Claim 53. (Previously presented) The method of claim 49 wherein the processing changes a first representation into a second representation.

Claim 54. (Previously presented) The method of claim 53 wherein the second representation is a digital representation.

Claim 55. (Previously presented) The method of claim 49 further comprising:
displaying information to a user.

Claim 56. (Currently amended) One or more circuits for a handheld device for communicating an image via a communication network, the one or more circuits comprising:

at least one processor for processing image data for one or more images from an operably coupled image capture device, transmitting processed image data for the one or more processed images over the communication network using a wireless communication interface, and displaying feedback to a user via an operably coupled display device; and

wherein a communication path used by the device to wirelessly communicate data is automatically selected by the at least one processor from a plurality of communication paths based upon a type of data being communicated, and wherein a first communication path is selected when the type of data is one or both of processed image data and [[/or]] a second communication path is selected when the type of data is speech data.

Claim 57. (Previously presented) The one or more circuits of claim 56 wherein the imaging device is a charge coupled device.

Claim 58. (Previously presented) The one or more circuits of claim 56 wherein the one or more images is one of a one dimensional code and a two dimensional code.

Claim 59. (Previously presented) The one or more circuits of claim 56 wherein the one or more images comprises text.

Claim 60. (Previously presented) The one or more circuits of claim 56 wherein the one or more images comprises handwriting.

Claim 61. (Previously presented) The one or more circuits of claim 56 wherein the one or more images comprises a picture.

Claim 62. (Previously presented) The one or more circuits of claim 56 wherein the wireless communication interface is used for communicating speech.

Claim 63. (Previously presented) The one or more circuits of claim 56 wherein the wireless communications interface is compatible with a cellular network.

Claim 64. (Previously presented) The one or more circuits of claim 56 wherein the wireless communications interface uses a spread spectrum technique.

Claim 65. (Previously presented) The one or more circuits of claim 56 wherein the communication network is a local area network.

Claim 66. (Previously presented) The one or more circuits of claim 56 wherein the communication network comprises a packet network.

Claim 67. (Previously presented) The one or more circuits of claim 56 wherein the communication network comprises a TCP/IP network.

Claim 68. (Previously presented) The one or more circuits of claim 56 wherein the processing comprises decoding the image from a first representation to a second representation.

Claim 69. (Previously presented) The one or more circuits of claim 68 wherein the second representation is a digital representation.

Claim 70. (Previously presented) The one or more circuits of claim 56 wherein the processing comprises character recognition.

Claim 71. (New) The one or more circuits of claim 56 wherein processing comprises identifying the type of information in the one or more images.

Claim 72. (New) The one or more circuits of claim 71 wherein the type of information is identified as at least one of text, handwriting, and a picture.

Claim 73. (New) The one or more circuits of claim 56 wherein the one or more images are captured in response to a first user action with the handheld device, and the one or more processed images are transmitted in response to a second user action with the handheld device different from the first user action.

Claim 74. (New) The one or more circuits of claim 73 wherein the first user action comprises pressing a button.

Claim 75. (New) The one or more circuits of claim 73 wherein the first user action comprises placing the image capture device in a certain physical relationship with an object whose image is to be captured.

Claim 76. (New) The one or more circuits of claim 73 wherein the second user action comprises placing the image capture device in a particular physical relationship with a device for holding the handheld device between uses.

Claim 77. (New) The one or more circuits of claim 76 wherein the device for holding the handheld device between uses comprises a holster.

Claim 78. (New) The one or more circuits of claim 56 wherein processing comprises storing the one or more processed images in the handheld device.

Claim 79. (New) The device of claim 22 wherein processing the image comprises identifying the type of information in the image.

Claim 80. (New) The device of claim 78 wherein the type of information is identified as at least one of text, handwriting, and a picture.

Claim 81. (New) The device of claim 22 wherein the image is captured in response to a first user action with the handheld device, and the processed image is transmitted in response to a second user action with the handheld device different from the first user action.

Claim 82. (New) The device of claim 81 wherein the first user action comprises pressing a button.

Claim 83. (New) The device of claim 81 wherein the first user action comprises placing the imaging device in a particular physical relationship with an object whose image is to be captured.

Claim 84. (New) The device of claim 81 wherein the second user action comprises placing the imaging device in a particular physical relationship with a device for holding the handheld device between uses.

Claim 85. (New) The device of claim 84 wherein the device for holding the handheld device between uses comprises a holster.

Claim 86. (New) The device of claim 22 wherein processing comprises storing the processed image in the handheld device.

Claim 87. (New) The device of claim 22 wherein selection comprises:

- sending a message requesting routing from the handheld device to a remote second device;
- receiving a message comprising routing information identifying communication paths through a network to the second device;
- selecting one of the identified communication paths using the routing information; and
- transmitting a message requesting setup of the selected communication path from the handheld device to the second device.

Claim 88. (New) The method of claim 37 wherein the image is captured in response to a first user action with the handheld image communication device, and the processed image is transmitted in response to a second user action with the handheld image communication device different from the first user action.

Claim 89. (New) The method of claim 88 wherein the first user action comprises pressing a button.

Claim 90. (New) The method of claim 88 wherein the first user action comprises placing a device for capturing the image in a certain physical relationship with an object whose image is to be captured.

Claim 91. (New) The method of claim 88 wherein the second user action comprises placing a device for capturing the image in a certain physical relationship with a device for holding the handheld device between uses.

Claim 92. (New) The method of claim 88 wherein the device for holding the handheld image communication device between uses comprises a holster.

Claim 93. (New) The method of claim 37 wherein processing comprises storing the processed image in the handheld image communication device.

Claim 94. (New) The method of claim 37 wherein selection comprises:

- sending a message requesting routing from the handheld device to a remote second device;
- receiving a message comprising routing information identifying communication paths through a network to the second device;
- selecting one of the identified communication paths using the routing information; and
- transmitting a message requesting setup of the selected communication path from the handheld device to the second device.

Claim 95. (New) The method of claim 49 wherein processing the image comprises identifying the type of information in the image.

Claim 96. (New) The method of claim 95 wherein the type of information is identified as at least one of text, handwriting, and a picture.

Claim 97. (New) The method of claim 49 wherein the image is captured in response to a first user action with the handheld image communication device, and the processed image is transmitted in response to a second user action with the handheld image communication device different from the first user action.

Claim 98. (New) The method of claim 97 wherein the first user action comprises pressing a button.

Claim 99. (New) The method of claim 97 wherein the first user action comprises placing a device for capturing the image in a certain physical relationship with an object whose image is to be captured.

Claim 100. (New) The method of claim 97 wherein the second user action comprises placing a device for capturing the image in a certain physical relationship with a device for holding the handheld image communication device between uses.

Claim 101. (New) The method of claim 100 wherein the device for holding the handheld image communication device comprises a holster.

Claim 102. (New) The method of claim 49 wherein processing the image comprises storing the processed image in the handheld image communication device.

Claim 103. (New) The method of claim 49 wherein the selection comprises:

- sending a message requesting routing from the handheld image communication device to a remote second device;
- receiving a message comprising routing information identifying communication paths through a network to the second device;
- selecting one of the identified communication paths using the routing information; and
- transmitting a message requesting setup of the selected communication path from the handheld image communication device to the second device.

Claim 104. (New) The one or more circuits of claim 56 wherein selection comprises:

- sending a message requesting routing from the handheld device to a remote second device;
- receiving a message comprising routing information identifying communication paths through a network to the second device;
- selecting one of the identified communication paths using the routing information; and

Appln. No. 10/706,425
Filing Date: November 12, 2003
Amendment filed October 14, 2010
Reply to Advisory Action mailed August 31, 2010

transmitting a message requesting setup of the selected communication path from the handheld device to the second device.
